Lab 12

Update midterm 2:

lab12.h:

Move the Animal class and the Speak class to lab12.h

Wrap the entire file in a #ifndef / #endif construction and define LAB12_H

Be sure to have the proper include statements and using namespace…

lab12.cpp

Delete the Animal class and Speak class.

Remove any unnecessary include statements.

Include lab12.h two times to be sure your program compiles correctly, then comment out the 2nd include.

Be sure your name and lab number are at the top of both your .cpp file and .h file.

Be sure your output is at the bottom of your cpp file.

Create lab12.zip, and place both files in your zip file.

Upload lab12.zip to Canvas.
